EDUCATION

Chapman University, Orange, CA — Expected Graduation January 2027 (Early)
Bachelor of Science in Computer Science
Minor in Analytics

TECHNICAL SKILLS

Languages & Runtimes: Python | SQL | Java | C++ | JavaScript | TypeScript

Frameworks: React | Next.js | Node.js

Tools: Git | Docker | AWS | Pandas

AI/ML: LLM APIs | Agentic Engineering | Agent Pipelines | Structured Outputs

PROFESSIONAL EXPERIENCE

Founder & Engineer | *Quorum (tryquorum.app)* — December 2025 – Present
- Architect and ship full-stack AI platform end-to-end as sole engineer from infrastructure to UI
- Design and tune LLM pipeline producing structured degree audits across accuracy, latency, and cost
- Drive product strategy from user research and competitive analysis through scoping, design, and launch
- Run experiments and analyze user behavior to prioritize roadmap and iterate based on feedback

Student Admin Assistant | *Chapman University – Orange, CA* — September 2025 – Present
- Identified scheduling bottleneck, scoped the problem, and shipped a model cutting manual effort 70%
- Drive event logistics cross-functionally across departments, employers, and 50+ volunteers to hit deadlines
- Create standardized operational templates adopted department-wide to streamline recurring event workflows

Website Designer | *Chapman University – Orange, CA* — May 2025 – Present
- Serve as sole technical point of contact for SGA leadership, scoping feasibility and delivering iteratively
- Designed and deployed an automated ticketing workflow, cutting request processing time 40%
- Own the SGA website end-to-end, balancing stakeholder needs, UX, and technical constraints

Computer Science Tutor | *Freelance – Remote* — November 2024 – Present
- Deliver personalized lessons in Python, Java, and C++ for college students, raising average grades by one letter

RELEVANT PROJECTS & EXPERIENCE

Machine Learning Tennis Match Predictor *(Python, Pandas, scikit-learn, XGBoost)* — July 2025 – August 2025
- Built predictive ML model on 65,000+ professional matches, achieving 64.5% accuracy on unseen matches
- Engineered reproducible feature pipeline ensuring clean data and reliable evaluation
- Engineered features from player history, surface, and head-to-head matchups to drive accuracy gains

Workforce Scheduling Optimization Tool *(Python)* — October 2025 – November 2025
- Built an optimization model using Google OR-Tools to automate shift scheduling from real department data
- Modeled constraints such as role coverage, availability, and workload balance to generate valid schedules
- Adopted by Chapman Career Center to replace manual scheduling for recurring department workflows

ACADEMIC AWARDS AND LEADERSHIP

Computer Science Club — 2024 - 2026
Artificial Intelligence Club — 2024 - 2026
Chapman Grant Recipient — 2023 - 2026
Study Abroad La Trobe University, Melbourne, AU — 2025
Outdoors Club — 2024 - 2026
